Application/Control Number: 09/812,140

Art Unit: 2826

Serial Number: 09/812140 Attorney's Docket #: 5740.02

Filing Date: 3/19/01;

Applicant: Neuhaus et al.

Examiner: Alexander Williams

Applicant's RCE in Paper No. 23, filed 4/15/03 is acknowledged.

Applicant's Amendment in Paper No. 20, filed 3/12/03 is acknowledged.

This application contains claims 1-20, 29-47 and 55 drawn to an invention non-elected with traverse in Paper No. 10. A complete response to the final rejection must include cancellation of non-elected claims or other appropriate action (see 37 CFR § 1.144 & MPEP § 821.01).

Claims 27 and 56-92 have been canceled.

The disclosure is objected to because of the following informalities: the application related applications should be updated.

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Art Unit: 2826

Claims 21 and 48 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The at least one electrically conductive hard particle is affixed, without an adhesive, in direct contact with a conductive surface of its associated electrical contact site, in not described in the specification or shown in the drawing. The drawing show an adhesive 124,224,324, in figures 1 to 3 uses for bonding the substrate to the chip.

Claims 21 to 25 and 48 to 50 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 21 and 48, it is unclear and confusing to what is meant by "the at least one electrically conductive hard particle is affixed, without an adhesive, in direct contact with a conductive surface of its associated electrical contact site." How is this possible when the drawing clearly show 124,224,324, in figures 1 to 3 using adhesive to bond the substrate to the chip?

Any of claims 21 to 25 and 48 to 50 not specifically addressed above are rejected as being dependent on one or more of the claims which have been specifically objected to above.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

<sup>(</sup>b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2826

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.

Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 21, 23 to 25 and 48 to 50 are rejected under 35 U.S.C. § 102(b) as being anticipated by Lake (U.S. Patent # 5,605,547).

For example, in claim 21 and similar claim 48, Lake (figures 1 to 6) specifically figure 3 show an electrical component assembly comprising: a) a substrate 10 having a plurality of electrical contact sites 13 on a surface thereof; and b) a plurality of electrically conductive hard particles 18 positioned on the substrate, such that each of the electrical contact sites has at least one electrically conductive hard particle associated therewith, wherein the at least one electrically conductive hard particle is affixed in direct contact with a conductive surface of its associated electrical contact.

Claims 26, 51 and 102 to 108 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Lake (U.S. Patent # 5,605,547).

Art Unit: 2826

Initially, it is noted that the 35 U.S.C. § 103 rejection based on a thin layer of metal plated and a electrical contact deals with an issue (i.e., the integration of multiple pieces into one piece or conversely, using multiple pieces in replacing a single piece) that has been previously decided by the courts.

In <u>Howard v. Detroit Stove Works</u> 150 U.S. 164 (1893), the Court held, "it involves no invention to cast in one piece an article which has formerly been cast in two pieces and put together...."

In <u>In re Larson</u> 144 USPQ 347 (CCPA 1965), the term "integral" did not define over a multi-piece structure secured as a single unit. More importantly, the court went further and stated, "we are inclined to agree with the solicitor that the use of a one-piece construction instead of the [multi-piece] structure disclosed in Tuttle et al. would be merely a matter of obvious engineering choice" (bracketed material added). The court cited <u>In re Fridolph</u> for support.

In re Fridolph 135 USPQ 319 (CCPA 1962) deals with submitted affidavits relating to this issue. The underlying issue in In re Fridolph was related to the end result of making a multi-piece structure into a one-piece structure. Generally, favorable patentable weight was accorded if the one-piece structure yielded results not expected from the modification of the two-piece structure into a single piece structure.

For example, in claim 21 and similar claim 48, Lake (figures 1 to 6) specifically figure 3 show an electrical component assembly comprising: a) a substrate 10 having a plurality of electrical contact sites 13 on a surface thereof; and b) a plurality of electrically conductive hard particles 18 positioned on the substrate; and a thin layer 13 of metal plated on each of the electrical contact sites, wherein the thin layer of metal affixes the at least one electrically conductive hard particle to a conductive surface of its associated electrical contact site, each of the electrical contact sites has at least one electrically conductive hard particle associated therewith, and the at least one

Art Unit: 2826

electrically conductive hard particle is affixed in direct contact with a conductive surface of its associated electrical contact.

Therefore, it would have been obvious to one of ordinary skill in the art to use the thin layer of metal plated and a electrical contact as "merely a matter of obvious engineering choice" as set forth in the above case law.

Claims 53, 54, 109 and 110 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Lake (U.S. Patent # 5,605,547 in view of Herbst (U.S. Patent # 5,913,110).

Lake show the features of the claimed invention as detailed above, but fails to explicitly show wherein the printed circuit board substrate comprises a smart card chip module or a smart label.

Herbst is cited for showing a method for producing a plastic material composite component. Specifically, Herbst (figures 1 to 15) specifically figure 4 discloses wherein the printed circuit board substrate comprises a smart card chip module or a smart label (see column 1, lines 33-65) for the purpose of providing a carrier element having protection for the chip.

Therefore, it would be obvious to one of ordinary skill in the art to use Herbst's smart card chip module or a smart label to modify Lake's substrate for the purpose of providing a carrier element having protection for the chip.

Claims 22, 28 and 93 to 101 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

## Response

Applicant's arguments filed 3/17/03 have been fully considered, but are most in view of the modified and new grounds of rejections detailed above.
